

EXCITING UPDATES FROM BAY RADIOLOGY

More Options, Faster Results

We have some exciting news to share about Bay Radiology! Our team and services have grown to make your visit even more convenient and comfortable.

More Expertise, Same Compassionate Care

We're proud to now have four fellowship-trained breast imaging radiologists seeing patients in our Arnold office. Each of our doctors trained at top programs and has years of experience focused exclusively on breast imaging.

Easier Scheduling for Busy Lives

We understand how hard it can be to fit in a mammogram. That's why we now offer appointments as early as 6:30 AM and as late as 5:00 PM, between Monday - Thursday.

A New, More Flexible Visit Experience

We now offer two types of mammogram appointments:

1. **"Online" screenings**

Stay for your results while you wait

2. **"Image and leave" screenings**

Have your mammogram and go about your day. Most patients will get results by text and email within hours of their mammogram and always within 1 day. If any additional imaging is needed, our staff will call you within 24 hours to schedule a follow-up visit within 1–2 business days (compared to weeks later at other facilities). If a biopsy is needed, we'll offer an appointment within one week—no long waits.

Why We Made These Changes

- **Shorter visits** 90% of patients can now complete their mammogram in less time.
- **No referral needed** for “image and leave” screenings.
- **Fast answers and peace of mind** Most results within one day.
- **Ready for the future** Our model supports upcoming AI technology that will help our doctors detect even the smallest details in your images.

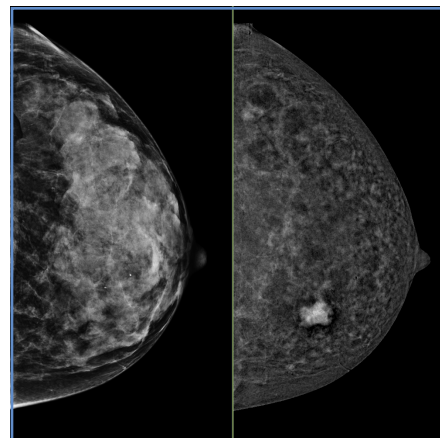

Diagnostic and Urgent Appointments

We continue to reserve appointment slots daily for patients with clinical concerns (e.g., palpable lump, discharge). All diagnostic patients are offered the opportunity to meet directly with our radiologists to review findings and discuss next steps.

Thank you for trusting Bay Radiology with your care. We welcome your questions and feedback and can be reached directly at info@bay-radiology.com or **410-544-3331**. We're honored to be part of your health journey and look forward to seeing you soon!

Breast Imaging Center

Now Offering Contrast-Enhanced Mammography (CEM)

We're excited to announce that Bay Radiology is the first in Anne Arundel County to offer contrast-enhanced mammography (CEM) — a new technology that can find breast cancers that may not show up on a standard mammogram in dense breasts.

CEM combines your regular mammogram with a small amount of contrast dye (the same safe dye used in CT scans). The dye collects in areas with extra blood flow, helping our doctors see any abnormal tissue more clearly.
